

When many farm operators and landowners take action in one place at the same time, we tip the balance to widespread, lasting farm and watershed health.

In agricultural watersheds throughout the Basin neighbors are increasingly working together to identify erosion and nutrient sources, implement solutions, and share what they're doing with others. Collective action changes conditions enough

so nature can renew itself, and helps keep land productive. This map displays watershed groups working in agricultural lands of the Upper Mississippi River Basin. The groups have strong farmer participation or are farmer-led.

GROUPS SHOWN ON THIS MAP

Watershed names in blue received project funding from Fishers & Farmers Partnership.

IOWA

- 2 Badger Creek Lake Watershed Project
- 51 Black Hawk Creek Water & Soil Coalition
- 4 Boone River
- 5 Buck Creek
